a
centered prior
shifted prior
$4\kappa\lambda_W$
$2\kappa\lambda_W$
observed rate of the objective gap
$\kappa\lambda_W = \kappa/\sigma^2$
b
unregularized optimum
prior (⋆: its policy)
$N(0, 1/4)$
$N(0, 1)$
$N(0, 4)$
$N(2, 1)$
μ_0
stopped utility U
geometric risk q_β (%)
c
$|q_\beta(\mu^*) - q_\beta(\pi_\Gamma)|$
risk slack bound
κ
