a
b
c
exact optimum at $m = 0.03$
parameter anchor
mean-only prior
action anchor
prior policy
breakdown probability $q_\beta$
stopped utility $U$
anchor strength $\kappa_p$
action relative entropy $\mathcal{A}$ to the incumbent
$\kappa_p = 1$
$\kappa_p = 10$
$\kappa_p = 100$
$\eta = 0.01$
$\eta = 0.1$
$\eta = 1$
