
a
multiplier in price units, m
10^0
10^{-1}
0.0
2.5
5.0
7.5
environment steps (millions)
tolerance 0.05
tolerance 0.01
tolerance 0
b
breakdown probability q_β
10^0
10^{-1}
10^{-2}
$\eta = 0.01$
$\eta = 0.1$
$\eta = 1$
incumbent rule
10^{-2}
10^0
10^2
stopped action relative entropy $\mathcal{A}$
upper bound from $\mathcal{A}$
action-regularized policies
