
a
b
c
d
e
stopped utility U
geometric risk q_β
geometric risk $q_\beta(\pi)$
price m
$U(\pi_0) - U(\pi)$
$m = 1$
$m = 0.3$
$m = 0.1$
constant rates
threshold rules
maximizer $\hat{\pi}$ of V_m
comparison rule π_0
line of slope $\nu = m/(1-\beta)$
right side of (F.2)
right side of (F.3)
rules within δ of max V_m
right side of (F.4), $\delta = 0.3$
